1. GENERAL PRESENTATION

This file format allows Chronopost France to transmit to its customers the tracking of their parcels, as it can be seen on our online tracking tool ChronoTrace.

It is based on a structure of flat ASCII file, fields of which are bounded by default by a separator semicolon (;) but can also use one pipe (!) or be in fixed length.

The default end of line character will be an LF but can be also personalized to be into a CRLF.
By default, a header line is not present, but can be added to the demand.

2. FILE FORMAT DETAILS

The display below explains the contents of the information line.
It is important to respect the type (A, N, AN) and the length indicated in the FORM column.

The meaning of the types are :

- A for Alphabetical
- N for Numeric
- AN for Alphanumeric

If the length is preceded of .., it is variable (from 0 in the indicated limit size). Otherwise, the length is fixed.

Examples :

- | | |
|----------|---|
| . A2 | 2 alphabetical characters (fixed length). |
| . N2 | 2 numeric characters (fixed length). |
| . AN35 | 35 alphanumeric characters (fixed length). |
| . AN..35 | Up to 35 alphanumeric characters (variable length). |
